Introduction to Programming

High Distinction Task 11.5: Video Presentation

Overview

This video presentation is to allow you to showcase your program or project and to highlight the difficulties you faced.

Purpose:	Demonstrate that you have reached a D or HD grade level and to showcase your work.
Task:	Produce a video that describes your custom project what motivated it, what you did and any results you obtained.
Time:	This task should be completed before due date for your portfolio. See the unit outline for details.
Resources:	Web, Course materials, library, academic journals.

Note: If you are not currently up to date you should skip this task and return to it once you are up to date with the Pass Tasks. Do not allow Distinction Tasks to delay you in keeping up with the unit's Pass Tasks.

Submission Details

Submit the video to Canvas (see the unit announcements for this submission), but also bring a USB with the video to the interview.

Instructions

Your video should be no longer than 3 minutes – it may be added to the end of your custom code video or a separate video (we recommend a separate video). It should address the criteria in the marking rubric for this task (see the unit's Canvas site).
